400 State Street

Designation Status: Eligible to be Designated a Historic Resource

Assessor Parcel Number: 037-212-

021

Historic Name: Woods Garage

Constructed: 1910 / 1916

Architectural Style: Vernacular

commercial building.

Property Type: Garage and Commercial Storefront

Original Use: Garage

Significance: The City of Santa Barbara establishes historic significance as provided by the Municipal Code, Section 22.22.040. Any historic building that meets one or more of the eleven criteria established for a City Landmark or a City Structure of Merit can be considered significant:

Criterion A. Its character, interest or value as a significant part of the heritage of the City, the State, or the Nation: Originally designed in 1910 as a one-story reinforced concrete building with rear garage addition constructed in 1916. The simple stucco storefront with its undulating parapet,

pronounced cornice with subtle pilasters outlining the true divided light fan window over the entrance as well as the true-divided light transoms over the large glass storefront windows contribute to the Spanish Colonial Revival/Mediterranean commercial streetscape of State Street and character of El Pueblo Viejo Landmark District.

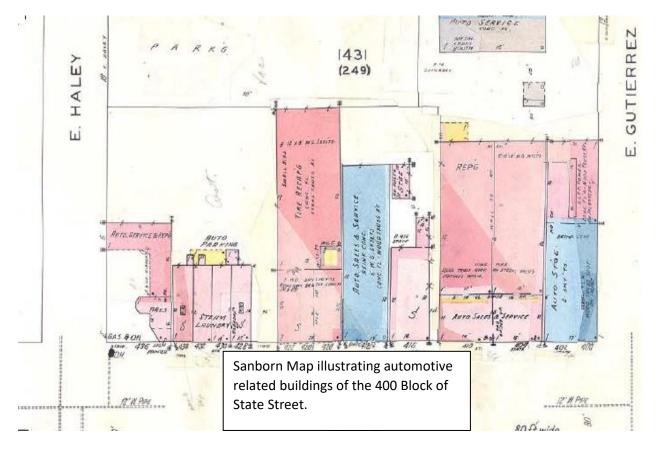

Constructed as an automobile store with mechanic garage in the rear the building was one of several automobile associated businesses on the street. The automobile store next door at 410 State Street was constructed in 1916 (demolished in 1992), and there were other auto stores and a tire store further down the block (see Sanborn Map below). The impact of the automobile on the broad patterns of American life stands as one of the most significant and prevalent themes of the twentieth century. The importance of the automobile

during Santa Barbara's formative years as a tourist mecca and retreat for the wealthy, together with the City's relatively isolated location, to some extent amplified the importance of automotive mobility to the region. The

410 State Street, the Cadillac building constructed in 1916, was demolished in 1992 for a new building. 400 State Street is a remnant of early automotive-oriented buildings that dominated State Street.

building at 400 State Street is a remnant of a great number of automotive-oriented buildings

established on lower State Street during the first three decades of the century. Few of these buildings remain today. As such, 400 State Street remains as a scarce example of an early automotiveoriented building. The building retains sufficient integrity to successfully convey these historical associations. The storefront facing State Street was likely to have been repaired right after the 1925 earthquake to the existing configuration. As the street was heavily damaged in the earthquake and most of the buildings were repaired to conform to a Spanish Colonial Revival/Mediterranean style. There is

no evidence that any further alterations were made to the storefront other than that in the 1950s the owners

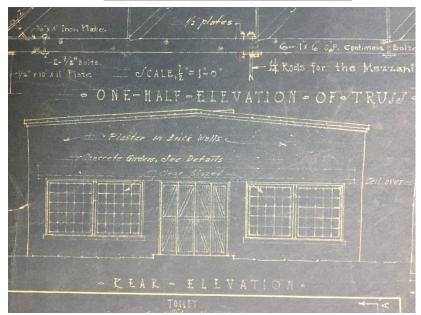

added aluminum storefront doors which were removed and replaced with an appropriate recessed wood doors in 1997. The building continued to be used for automobile purposes with Cadillac and Porsche having leases in the site in the 1970s. The rear of the building is still used as a garage. The building is important to the Santa Barbara's State Street streetscape and to El Pueblo Viejo Landmark District as an original building with its undulating parapet, projecting cornice and pilasters, true divided fan light, and true divided transoms.

This building is an example of a small,

vernacular commercial interpretation of the Spanish Colonial Revival/Mediterranean style, which became an important part of Santa Barbara's heritage in the 1920s, when the City deliberately transformed its architecture and

Gutierrez Street and rear elevation

1916 drawings of rear elevation.

look from an ordinary western style town into a romantic Spanish Colonial Revival/Mediterranean style city. This transformation was the result of the planning vision of a number of Santa Barbara citizens in the early 1920s with the founding of the Santa Barbara Community Arts Association, which urged that the town identify its individual character and then use planning principles to develop it. As an original 1910/1916 commercial building contributing to the significance of State Street and El Pueblo Viejo Landmark District, the building qualifies as a Structure of Merit under criterion A.

Criterion G. Its embodiment of elements demonstrating outstanding attention to architectural design, detail, materials, and craftsmanship:

The building embodies elements that demonstrate an outstanding attention to detail, materials, and craftsmanship in the State Street elevation. True divided fan light window over the front entrance and the divided light transom windows over the storefront windows; these are unique details that are no longer found in storefront design that demonstrate quality details, materials, and craftsmanship.

Historic Integrity: There is no evidence that any further alterations were made to the storefront after 1925 other that c. 1950s aluminum storefront doors that were removed and replaced to an appropriate recessed wood storefront in 1997. The State Street elevation has high historical integrity to its post 1925 appearance and contributes to the Spanish Colonial Revival/Mediterranean commercial streetscape setting in the El Pueblo Viejo Landmark District. The side elevation on Gutierrez Street has a majority of the same fenestration openings as shown in the original drawings although some of the windows and doors have been altered with newer windows. The rear elevation has the same openings, however not the same materials as the rear wood carriage doors, and divided light windows designed for the building in 1916 were replaced with an aluminum door and window coverings. The front elevation of the building, is intact so that it has high historic integrity of location, feeling,

setting, design, materials, workmanship, and association. The building can convey its c.1925 appearance. The side and rear elevation do not retain a high level of historic integrity as the materials have been altered and do not match the original materials.
